The screenshot shows a Jupyter Notebook interface for a .NET environment. The browser address bar shows the URL: localhost:8889/notebooks/JUPYTER%20NOTEBOOKS/ML.NET/taxifare-mlnet-jupyter-demos/MLNET-Jupyter-Demo.ipynb#Load-datasets-into-IDat... The notebook title is "MLNET-Jupyter-Demo" and it indicates "Last Checkpoint: a day ago (unsaved changes)". The interface includes a menu bar (File, Edit, View, Insert, Cell, Kernel, Widgets, Help) and a toolbar with icons for file operations and execution. The active cell contains the following C# code:

```
In [26]: //Util class to preview loaded data in IDataView
public static List<TaxiTrip> Head(MLContext mlContext, IDataView dataView, int numberOfRows = 4)
{
    string msg = string.Format("DataView: Showing {0} rows with the columns", numberOfRows.ToString());
    display(msg);

    var rows = mlContext.Data.CreateEnumerable<TaxiTrip>(dataView, reuseRowObject: false)
        .Take(numberOfRows)
        .ToList();

    return rows;
}

display(h4("Showing a few rows from training DataView:"));

var fewRows = Head(mlContext, trainDataView, 5);
display(fewRows);
```

The output of the code is a table with the following data:

index	VendorId	RateCode	PassengerCount	TripTime	TripDistance	PaymentType	FareAmount
0	CMT	1	1	1271	3.8	CRD	17.5
1	CMT	1	1	474	1.5	CRD	8
